Whether you are an independent truck driver, a medium-sized freight forwarder or a multi-national logistics company, you can use Teleroute’s expertise and solutions to increase your efficiency and profits.

Part of a leading worldwide Group

Teleroute is part of Wolters Kluwer, a leading global information services and publishing company with 2007 annual revenues of €3,4 billion and 19544 employees across Europe, North America, and Asia Pacific.

Solutions for greater efficiency and profitability

Teleroute helps transport professionals to serve their customers quickly, find reliable business partners and grow their business further, whilst increasing efficiency and maximising profits.

Teleroute offers comprehensive solutions for freight and transport management that are tailored to meet the needs of companies in the road transportation industry:

Teleroute GO

The easy and flexible solution designed to meet the needs of owner drivers fill their trucks whenever and wherever they are and avoid empty running.

Teleroute PRO

The cost-effective and comprehensive solution tailored to meet the needs of hauliers and freight forwarders increase their business efficiency.

Teleroute ACTIVE

The powerful solution tailored to meet the needs of big transport and logistics operators and multinationals reach operational excellence and maximise profitability.

Meeting the needs of multi-site customers

Teleroute is committed to providing a service that perfectly matches the needs of multi-site customers, giving them the support of professional local teams, as well as a dedicated Key Account Manager in each country.

Teleroute fully integrates into your way of working and offers you a service tailored to your needs. With an office in each country, Teleroute is able to supply you with uniform solutions throughout Europe.

Teleroute also helps you monitor success by supplying you with statistics on demand. Giving you the support your business needs in an ever changing market.

As well as ensuring immediate access to freight and vehicle offers, these solutions include a whole range of high-value features and services.

Powerful tools to have freight and vehicles at your fingertips

• Search Agent

Get freight offers immediately, wherever you are.

The Search Agent feature keeps you informed of any new offer available in the freight exchange matching your criteria via alerts on the freight exchange, or by SMS, e-mail or fax. This service is free, only the SMS is charged.

• Automated Vehicle Exchange

Receive offers that match your needs, fast.

The Automated Vehicle Exchange links hauliers' searches to the posted needs of forwarders. It also lets freight searchers advertise their truck capacity, sending lists of matching vehicle offers to freight posters.

• SMS

Send detailed information to all your drivers easily.

It allows you to send text messages to your drivers' mobile phones directly from the freight exchange, giving them all the information they need.

• Freight2Go

Search and find the freight that is ready to go right now.

Freight2Go lets you see the most immediate freight offers that match your search criteria. This way you can view the routes where a significant quantity of freight is still on offer.

• FreightTools

Manage freight information directly from your PC's desktop.

FreightTools allows you to receive real-time freight offers, delete offers quickly and have immediate access to the freight exchange directly from your PC's menu bar.

Smart services that create a reliable and secure environment to do business in

• Transport Company Directory

Know who you do business with and advertise your company.

This accurate information tool allows you to retrieve detailed information about transport professionals, find new reliable partners and share information about your own company.

• FreightTalk

Make deals safely and securely online. Stay connected with all transport professionals.

This workflow and professional communication tool is based on instant messaging technology, allowing you to negotiate online freight offers, confirm pick up and delivery, and stay connected with everyone you need to in the business. It is the safe and secure way to discuss and make deals online. It is faster and more economical than phone, fax or e-mail.

Best of breed cartography and accurate journey planning

• Transport Route Planner

Save time and fuel by finding the shortest, fastest route.

This professional mapping system calculates travel times and distances to enable transport professionals to plan their journeys efficiently throughout Europe. It also provides a precise cost of the itinerary including fuel and toll costs.

What is a freight exchange?

A freight exchange matches freight with available vehicle space. It is an increasingly useful tool in the everyday lives of transport professionals. It provides a quick and easy way for hauliers to search for available freight or post their available capacity, and for freight forwarders to offer freight to be transported or to search for vehicles.

Being logistically efficient means being environmentally friendly too.

Environmental questions are a hot topic on everyone's agenda, and transport professionals are no exception. Teleroute is committed to finding new ways to help transport professionals reduce their ecological footprint. Because road transport accounts for nearly 80% of inland freight transport across Europe, it is also responsible for a large share of greenhouse gases, around 20% of the total. Reducing the large number of vehicles running empty at any given time would be one way to improve this figure. According to some estimates, the number of empty trucks is as high as one in four.

Information technology can make a real difference. Ensuring a vehicle is being used to its full potential, by being loaded on both outbound and inbound journeys, will reduce its carbon footprint and increase the financial efficiency of each journey.

By using Teleroute solutions, transport professionals reduce empty trips, fuel consumption and CO2 emissions, while at the same time increasing their efficiency and profitability.
